

**AIDS- LETS DO MATH**  
By Peter Ndungu Wamwea

Whether there are drugs or no drugs,  
I believe there is a positive measure that can be used to tackle AIDS  
Mathematically speaking, we can add our efforts;  
if addition fails we can multiply our ambition,  
if multiplication fails we can divide ourselves into small groups for discussion

**LETS DO THE MATH AND SEE**

There are two formulas when it comes to dealing with AIDS  
Formula one, AIDS is real. Formula two, if you think AIDS is not real, refer to rule number one,  
and what does rule number one says; AIDS is real  
AIDS is not an African Influential Dancing Style, rather it's a mathematical formula that asks,  
**Am I Doing Something?**  
I as government  
I as patient  
I as the future and I as a friend

**LETS DO MATH**

HIV is the least common multiple of a **H**istory **I**n the **V**oid but we can personalize it to mean,  
**How Individual Ventures** into the beauty of relationship, style and fashion

**LETS DO MATH**

To bring out history from the void, requires our passion and ambition.  
This can be done by applying the law of fraction.  
Actually, you can measure the value of infection by converting your action into two decimal  
points, nice idea

**LETS DO MATH**

If AIDS is a painful situation, then we need a bit of construction to find our way out to freedom.  
Geometry might make us judgmental but probability says there's a way out  
The letter **I** in AIDS is an index and it could mean induced but **A** is an angle that points to you  
the angel  
But we can open the brackets of stigma by multiplying our equation of condition by love and  
care.  
The answer will give us a rhythm of hope and song

**LET'S DO MATH**

The circumference of information is determined by our motivation to fight the scourge, that is by  
going round the world not with condemnation but with salvation  
The circumference formula is  $Pie\ d$ ;  $Pie\ d$  brings us back to our deeds  
So how do you know if your habits are leading you to a positive conclusion?  
Its simple, multiply your condition to your decision and to your position, if the answer is in  
cubic form that means you're in the right form

### **LETS DO MATH**

If we know the cost of adoration its easy to find the cost of hospitality, again if you know how many flowers you can give to victims, you can find how much wonders you can cause in and out of the streets

Make sure the denominator of control relates well with numerator of hope  
Hope to belong

Hope to express and hope to give strength

See, we do not need a financial knowledge to calculate the value of prevention, PAYE is the answer, PAYE means, the more you **P**ractise **A**bstinence, the less **A**IDS will become **E**xplosive

### **LETS DO MATH**

You might not be good enough in calculation but when it comes to relationship you can find your condition.

This is how you do it.

Take an orange and cut it into two.

Using your mouth as the calculator find the area of the juicy part.

If it's bitter, form an equation.

If it's very sweet, round it off until marriage

### **LETS DO MATH**

For those who are sick, you can use the BODMAS formula to always lift your moods  
BODMAS means, always be brave, optimistic, desirable, marvelous, ambitious and sure

If you're stuck, remove the bracket of fear and simplify

### **LET'S DO MATH**

You can calculate your status through geometry.

This is how you do it. Make a line of confidence.

With commitment as the center and any radius, make an ark of courage.

Open the compass wider and to capture the spirit of empowerment and with a radius not small than your belief make another ark of courage.

If the angles in the triangle are not equal, visit a counselor tonight (VCT)

### **LETS DO MATH**

Getting round the problem of AIDS can be as simple as finding the area of a circle.

The formula is  $PR^2$

Pie as in, we can try

$R^2$  can mean relationship squared, the closer we get to the sick, the more we break the ropes of the scourge

And how do you find the sine and cosine rules of purity?

By making it fine and precise.

For example, if your girlfriend walks 8km due south, draw a vector.

If she comes very near to you, put your reasoning into two decimal points

AIDS is not **A**cquired **I**n the **D**arkness and **S**ilence but AIDS is **A** friend **I**n the **D**arkness who needs a **S**mile. We can receive him with joy and gladness
